Barbara – In talking with my co-workers I have to revise the regulatory cites that I provided to you on Friday. For changes to your EPA approved Post Closure Monitoring Plan for the slag pit sump you should look at 40 CFR 265.118 which addresses amendments to a post closure plan. 40 CFR 265.118(d)(1)(i) requires a written request to the Regional Administrator to authorize the change to the approved plan. The written request must include a copy of the amended post-closure plan. The public notice requirements are then found in 40 CFR 265.118(f) summarizes the public process. It looks like EPA provides the public notice not FMC. This is still qualified that Andy has not provided input on this approach but wanted to clarify this for the submittal you are planning to submit this week. Give me a call if you have any questions. Thanks.
